Self Retracting Lifeline

**Model RL25A
"The Viper"**

NEW

Regardless of the name, the Viper will keep your fall far from deadly. This self retracting lifeline combines user friendliness with ultimate safety. Weighing in at a mere 9 pounds, the Viper packs 25 feet of mobility into a compact and durable housing made from lightweight cast aluminum.

An exterior shock absorber takes all the guess work out of the inspection process, allowing the user to clearly see all of the deceleration components. And, the Viper is designed specifically to prevent those nuisance lockups that occur while performing important job functions.

Because of easy inspection of components that are typically on the inside of retractable lifeline devices, there truly is no need for factory recertification.

The Viper unit is available with different working line also. Galvanized wire rope, Stainless Steel wire rope, and Technora (Aramid fiber) synthetic line can be used.

Ordering information:

Model Number

RL25AG

RL25AS

RL25AT

Description

Viper retractable lifeline with 25' of galvanized wire rope

Same as above with Stainless wire rope
